

## DOUBLE BLOCK AND BLEED (DBB) ISOLATION & TEST PLUG 3/4" TO 24"\*

After more than half a century of various industries using the same basic technology, with known incidents of plug ejections, a major advancement in piping isolation and test plugs has been long overdue. GripSafe ST plugs are the result of a fundamental rethinking of traditional plug designs. With its new, patented independent wedge gripping system, GripSafe ST provides maximum holding capabilities while lowering risks to personnel and equipment - making it the safest and most reliable plug in the world.

### SAFETY & RELIABILITY

**Instantly Secure.** With its unprecedented patented design, GripSafe ST's independent self-gripping technology virtually eliminates the risk of plug ejection from the moment it's inserted into the pipe, without tightening a single nut.

**Superior Self Gripping.** The innovative system distributes equal loading across the gripping wedges ensuring maximum surface contact and holding capabilities. As pressure increases behind the plug, the wedges grip tighter. Even in pipe diameters that are asymmetrical, each wedge independently adapts to variances within the pipe. Coupled with its automatic gripping feature upon installation, GripSafe ST takes "self-gripping" to a new level.

**Less Weight.** GripSafe ST plugs weigh less on average than competitive products. Significant weight differences exist as plug sizes increase, reaching upwards of 50% weight reductions in larger sizes without sacrificing holding capabilities.

**No Pipe Surface Damage.** Unlike competitive products which rely on serrated jaws to bite into the pipe for holding purposes, GripSafe ST uses a specially designed wedge system that grips the pipe without scarring the surface. GripSafe ST eliminates the need for a segment of sacrificial pipe, or the cleanup necessary to remove surface deformations other tools create.

**Non-Contaminating.** GripSafe ST plugs utilize a proprietary texture on the gripping wedges that can be used on any metal type with no carbon contamination. Therefore, in contrast with other plugs, GripSafe ST requires no alternate parts for use in stainless and other alloy pipes where cross contamination is a concern.

### APPLICATIONS

**Flange Weld Testing.** Pressure can be placed between the two seals to test weld-neck flanges by means of hydrostatic pressure, checking for hoop stress failure, weld leaks and/or pinhole leak paths while providing protection from any unexpected pressure discharge.

**Pre/Post Weld Operations.** Dual port design provides enhanced cooling by circulating water between the seals during pre/post weld processes (on 6"+ models).

**Isolation.** Increase safety by preventing exposure to hydrocarbon or other process leaks. Eliminate risk of injury to personnel in the event of inadvertent valve openings, valve leaks, or other pressure equipment failures upstream.

**Positive Isolation Monitoring.** Pressure between the two seals verifies seal integrity and ensures the plug's seals are effectively isolating the pipe.

**Line Purging.** Feed inert gases through the vent pipe, into a vessel, for back-purging welds or to remove oxygen for other processes.

**Table 2: Maximum Allowable Pressures (MAP)**

Use the table below to determine the maximum allowable pressure (MAP) the plug and pipe can be subjected to without yielding the pipe. The yield strengths listed in the table correspond to typical minimum yield strengths of standard pipes. If using a Material Test Report (MTR) to determine the yield strength of the pipe or if the pipe yield strength exceeds the highest in the table, the precise MAP can be determined by linear interpolation. **Do not exceed MAX PLUG BACK PRESSURE RATINGS.**

NPS Nominal Pipe Size	PIPE SCHEDULE	MAX PLUG BACK PRESSURE RATING (PSI) (NOT TO EXCEED)	MAXIMUM ALLOWABLE PRESSURE FOR GRIPSAFE PLUGS IN PIPE BASED ON PIPE YIELD STRENGTH - SELECT THE COLUMN BELOW THAT IS LESS THAN OR EQUAL TO PIPE YIELD STRENGTH (PSI) -										
			30000 PSI (A106 A)	35000 PSI (A106 B)	40000 PSI (A106 C)	46000 PSI (X46)	52000 PSI (X52)	60000 PSI (X60)	70000 PSI (X70)	80000 PSI (X80)	90000 PSI (4140HR)	100000 PSI (4140SR)	110000 PSI (P110)

\* Larger sizes and custom configurations available upon request. Smaller sizes release date pending.

• NPS 6-24 TOOL OD MUST BE WITHIN 1/8" CONCENTRICITY TO THE PIPE ID.

• NEVER EXCEED THE MAXIMUM RATED PRESSURE OF THE LOWEST RATED COMPONENT IN THE SYSTEM.

• DATA IS SUBJECT TO CHANGE. Consult manufacturer to verify that this document is the latest release.
